

Exercise 1

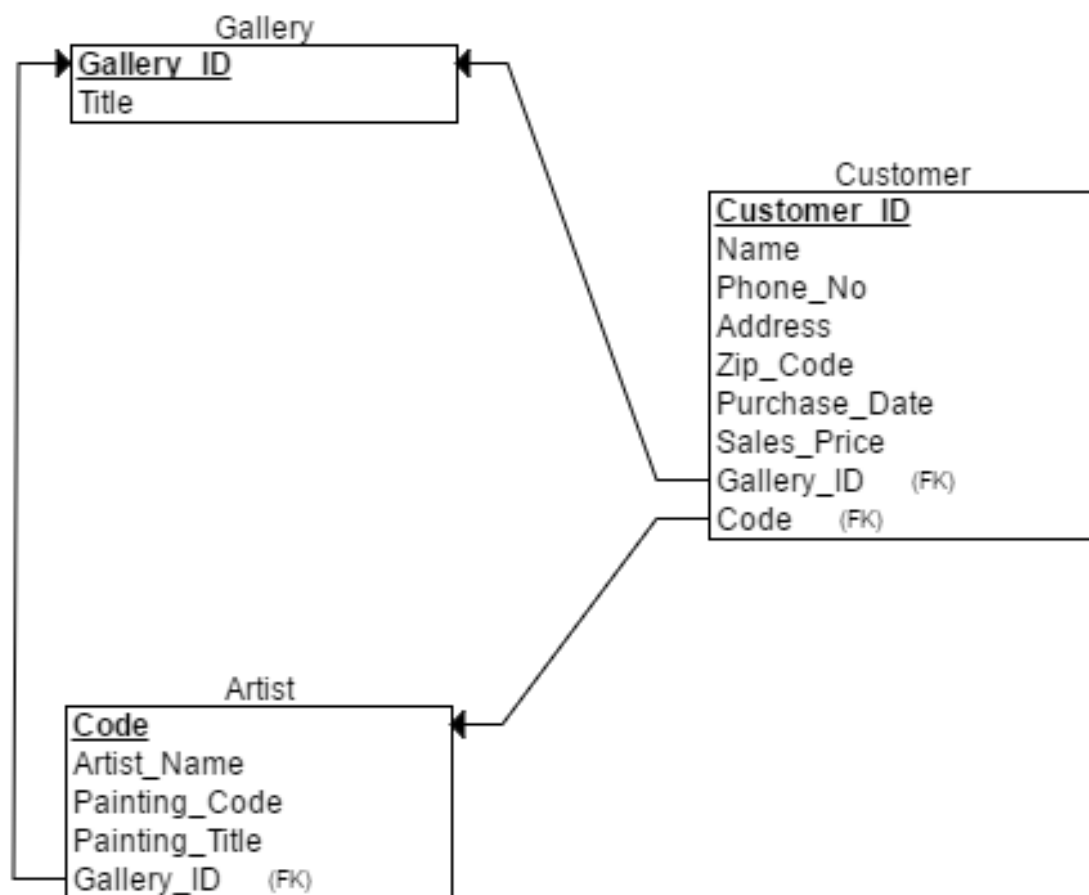

The gallery has the title.

The customer has the customer details followed by the price they paid and when they purchase an art piece.

The artist table lists all the artist ids, names, codes etc. Everything relevant to the artist goes in this table.

Customer table needs to keep track of the gallery id and the code of the artist.

Artist table only needs to know the gallery id it is currently available at and placed in.

Exercise 2

The diagram shows that the student having a reference in order to make an application for another school. The student is also given a reference from their prior school with the details as seen below. All values are required in order for the student to be able to be considered for another school. The prior school has the records of the student hence has the student id. The student has their application no. The reference table needs the id of the student and the prior school with the application no in order to search the right people.
